ThreatGuard

Secutor magnus

Secutor Magnus brings the highest level of continuous monitoring to the enterprise. The first product of its kind designed specifically to meet the security configuration requirements set forth by the federal government, Magnus provides centralized management of automated compliance and vulnerability assessments across an organization's desktops and servers.

Easy to deploy and use, Magnus tests computer configurations against defined policies and provides continuous status reports. The National Institute of Standards and Technology (NIST) has ushered in a new era of standards-based compliance assessment. For top-level government secrets to desktop data at your office, Secutor Magnus exceeds the most stringent of standards as a complete compliance solution.

Key Features:

Automated Assessment and Enforcement
- Periodically assess compliance across the network with the Magnus scheduler
- Deploy with or without SOA (Service-Oriented Architecture) agents
- Desktop module can enforce standards prior to deployment of new systems
- Operational profiles apply authorized deviations during lockdown procedures
- Automatically determines that all required security patches are in place

Restrict Administration to Authorized Personnel
- Proper credentials are required to view and apply settings
- Executive-level views permit read-only access to compliance status

Logical Deviation Documentation
- Leverage Secutor Prime deviation profiles across the entire network
- Includes accountability, expiration and traceability to requirements

Architecture & Supported Platforms
- Endpoints: Microsoft Windows, Solaris, Red Hat Enterprise Linux, more
- Magnus requires a Microsoft 2008 Server (or newer) physical or virtual machine

Targeted Solutions
- Continuous compliance management
- Cloud environment security
- Enterprise compliance
