

Secutor prime^{MD}

Secutor Prime MD is the first standards-based security auditing product designed to satisfy the Health Insurance Portability and Accountability Act (HIPAA) compliance needs of the medical community. Utilizing the National Institute of Standards and Technology (NIST) SP 800-66 and SP 800-53 instructions, Secutor Prime MD evaluates computer compliance to the HIPAA Security Rule and provides exception management, remediation, and reporting. This tool specifically focuses on protecting the confidentiality, integrity, and availability of electronic protected health information (EPHI). While Secutor Prime MD targets individual computers, it interoperates with the rest of ThreatGuard's Secutor products to satisfy the evaluation needs of mobile auditors and enterprise environments. With Secutor Prime MD, HIPAA compliance has never been easier.

Key Features:

Use of NIST, DoD, and other SCAP-based Security Content Automation Files

- Direct consumption of government and commercial eXtensible Configuration Checklist Descriptions Format (XCCDF) and Open Vulnerability and Assessment Language (OVAL) definition content
- Support for Open Checklist Interactive Language (OCIL) expressed interactive questionnaires
- User can specify the configuration files to use without any conversion requirements
- Supports assessments using User-generated SCAP-compliance content
- Provides runtime notes, allowing auditors and security engineers to validate assessment decisions

Security Patch Checks & Vulnerability Assessment

- Automatically determines that all required security patches are in place
- Performs vulnerability assessment of operating system and major applications
- Automated update system keeps application and assessment content current

Policy Exceptions and Configuration Remediation & Undo

- Policy exceptions can be defined for failed rules and Plan of Action and Milestones (PoAM) assigned
- Automatically modifies configuration and security settings to address any discrepancies
- Perform remediation undo of individual rules or full system restore using multiple restore points

Standards-Based Assessment System

- SCAP versions 1.2, 1.1, and 1.0 validated solution
- Incorporates optimized XCCDF document parsing engine
- Supports OVAL version 5.x as definitions evaluator

Security Reporting & Data Export

- Includes new HTML, PDF, and RTF-based reports suitable for printing and emailing
- Reports include summary and detailed benchmark scoring
- Option for exporting results to SCAP (ARF), XCCDF, CSV, OVAL, OCIL, and Secutor Magnus files

Architecture & Supported Platforms

- Systems capable of running the Oracle JVM or OpenJDK (Windows, Linux, OSX, etc.)
- Requires Java Run-time Environment 1.5x or greater (embedded 1.8x included)
- Can be installed locally or run from thumb drive or other removable media

Targeted Solutions

- Local compliance evaluation and remediation
- Offline assessment of configuration files from various vendors
- Benchmark viewer (for SCAP benchmarks and saved assessment results)
