

Secutor Prime Professional pushes Secutor Prime to a new level. The Professional version includes all the powerful features that Prime Standard offers, plus adds agentless assessments of remote targets, continuous monitoring of multiple systems, Active Directory target enumeration, and trending analysis. The Secutor Prime product line was the first to support automated compliance evaluation, deviation management and remediation using the government's automated content standard. Prime Professional fully integrates with Secutor Magnus and other SCAP-validated products to bring flexibility to your compliance portfolio.

Key Features:

Continuous Compliance Management

- Define compliance tasks to periodically assess multiple remote computers agentlessly
- Leverages the CPE standard to automatically determine applicable benchmarks for targets
- Track and apply policy deviations across systems and generate reports from a single desktop

Use of NIST, DoD, and other SCAP-based Security Content Automation Files

- Direct consumption of government and commercial eXtensible Configuration Checklist Descriptions Format (XCCDF) and Open Vulnerability and Assessment Language (OVAL) definition content
- User can specify the configuration files to use without any conversion requirements
- Support for Open Checklist Interactive Language (OCIL) expressed interactive questionnaires
- Provides runtime notes, allowing auditors and security engineers to validate assessment decisions

Security Patch Checks & Vulnerability Assessment

- Automatically determines that all required security patches are in place
- Performs vulnerability assessment of operating system and major applications
- Automated update system keeps application and assessment content current

Policy Exceptions and Configuration Remediation & Undo

- Policy exceptions can be defined for failed rules and Plan of Action and Milestones (PoAM) assigned
- Automatically modifies configuration and security settings to address any discrepancies
- Perform remediation undo of individual rules or full system restore using multiple restore points

Standards-Based Assessment System

- SCAP versions 1.2, 1.1, and 1.0 validated
- Incorporates optimized XCCDF document parsing engine

Security Reporting & Data Export

- Includes new HTML, PDF, and RTF-based reports suitable for printing and emailing
- Reports include summary and detailed benchmark scoring
- Option for exporting results to SCAP (ARF), XCCDF, CSV, OVAL, OCIL, and Secutor Magnus files

Architecture & Supported Platforms

- Includes compliance assessment content for Windows, RHEL, HP-UX, AIX, Solaris, and more
- Requires Java Run-time Environment 1.5x or greater (embedded 1.8x included)
- Can be installed locally or run from thumb drive or other removable media

Targeted Solutions

- Local and remote compliance evaluation and remediation
- Offline assessment of configuration files from various vendors and saved assessment results
- Benchmark viewer (for SCAP benchmarks and saved results)
