

# ThreatGuard v4.5

Vulnerability & Compliance Management System

ThreatGuard represents a significant leap forward in automated vulnerability and compliance management products. With the ever increasing number of network security threats, periodic security assessments are no longer adequate. By gently and continuously probing networked assets for vulnerabilities and configuration problems, ThreatGuard addresses the reality of today's security environment. Its compliance management features allow security policies to be defined and deviations to be identified and tracked. ThreatGuards can be stand-alone or organized hierarchically, providing centralized management and rich security posture reporting and archival. ThreatGuard's sophisticated technology is delivered in an affordable, easy-to-use appliance appropriate for staffs of all experience levels.

## Key Features and Advantages

### Continuous Security Auditing

- × Continuously discovers, analyzes, and tracks network security posture
- × Operates gently in the background requiring no user intervention
- × Automatically identifies and audits network assets
- × Auto-assigns security problems to technicians or remediation systems
- × Tracks and manages remediation efforts, including auto-escalation capability
- × Extensive references and search capability for vulnerability research

### Compliance Management

- × Define complex security policies for individual or groups of assets
- × Identifies non-compliance or vulnerability-related issues and alerts administrators or 3<sup>rd</sup> party products
- × Snapshot capability provides tracking of security posture over time
- × Data reporting and export tools included for regulatory compliance

### Rich Reporting System

- × Complex context-sensitive reports designed for executives through technicians
- × Reports can be exported in common formats including HTML, CSV and PDF
- × Includes data export features

### Administration and Usage

- × Comprehensive user and group authentication and authorization controls
- × Detailed auditing, reporting, and alerting of ThreatGuard user activities
- × Supports ThreatGuard AppGate, HTTPS, SSH and serial administration
- × Navigator client program provides rich graphical interface for users
- × Includes helpful setup wizards

### Large Vulnerability & Configuration Database

- × First commercial product to support the Open Vulnerability and Assessment Language (OVAL) – OVAL definitions consumer and full results producer
- × Performs unauthenticated and authenticated security scans – agentless
- × Evaluates all modern operating systems including Windows, Linux, Solaris, HP-UX, NetWare, Cisco IOS, BSD, MacOS, IRIX, AS400, RS6000 and embedded systems
- × Fully integrated Common Vulnerability Scoring System (CVSS)
- × Certified Common Vulnerabilities and Exposures (CVE) and Open Vulnerability and Assessment Language (OVAL) compatible

### Scanning Policy Controls

- × Comprehensive group and host scanning policy controls
- × Granular configuration of all assessment engine features
- × Global, service, and protocol scanning exceptions to protect sensitive assets

### Automatic Updates

- × Automatic or scheduled updates via the web, internal server, or CD-ROM
- × "Update Now" feature for quick update or complete server or client refresh

### Architecture & Supported Platforms

- × Server delivered as embedded Appliance – requires zero full time equivalents for administration
- × Virtualized software version available for smaller networks
- × Java-based Navigator client runs on all JRE 1.4x and greater platforms
- × Decentralized ThreatGuards can be organized hierarchically to provide automatic aggregation of data showing enterprise security posture
- × Includes SOAP server for integration with third-party products
- × Integrated context-sensitive help
- × Includes 3-Year hardware warranty
